DETAILED ACTION

Allowable Subject Matter

Claims 1-26 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose nor suggest applying a head related transfer function, a mono mixing factor, and a panned mixing to incoming audio streams and using user input to select between the mixing to produce an output audio stream, as required by independent claims 1, 9, 16, and 20. Smits discloses a teleconferencing method with three-dimensional sound positioning (head related transfer functions), however, there is no suggestion to include a mono mixing factor and panned mixing factor and selecting between three types of mixing. Cohen does disclose a mono mixing (contrary to Applicant's assertion), however Cohen does not disclose nor suggest the use of head related transfer functions and selecting between the three types of mixing after the mixing has been applied to the incoming streams. Likewise, Gentle and Connor disclose applying head related transfer functions to accomplish three dimensional audio localization in a teleconferencing environment, however those references are silent on mono mixing and panned mixing. Newly discovered reference Hiipakka, US Patent Application Publication 2003/0098892 discloses a handheld device having auditory icons. In paragraph 29, it is disclosed that the icons may be implemented in mono, stereo amplitude panning, or head related transfer functions. However, there is no suggestion to combine the teaching of the sound quality of icons in a handheld device with the prior art of record. Specifically, there is no proposal of selecting between mono, stereo panning, or head related transfer function (three dimensional audio) reproduction.
